D-CSR 3604
Digital channel and band selective repeater for public safety
EMEA & APAC

Key features
- Large repeater coverage footprint due to high output power and gain.
- Dual aspect – programmable band or channel selective mode.
- Very low propagation delay leading to higher security, resilience and availability of information.
- Easy system implementation with built-in commissioning tools.
- Time-slot based ALC minimizes noise contribution.
- Supervision available over various wireless modems.
- Built in spectrum analyser.

The D-CSR 3604 provides quick, cost-effective and secure radio coverage in any TETRA, TETRAPOL and many UHF networks and can handle up to eight carriers in channel selective mode or 2 sub-bands in band selective mode within the 5 MHz band. Through the use of the D-CSR 3604 an operator can easily expand a base station’s service area by filling in coverage holes caused by terrain, buildings or tunnels.

The wireless interface permits the operator to remotely configure RF parameters as well as monitor alarms on a continuous basis. Supervision is available over various wireless modems.

The D-CSR 3604 can also be used as an off-air repeater to provide coverage in shorter tunnels.

 Longer tunnels can be covered by connecting the D-CSR 3604 to an Axell Wireless Optical Master Unit (OMU) that feeds a number of fibre fed repeaters.

(*) The squelch is set to -108 dBm, which ensures correct operation for most repeater system scenarios. It will open approximately 3dB below the static sensitivity in the repeater cell thus it will be open to any mobile on the cell border.

(**) Note: Case size for 7 MHz B/W options is approx. 115 mm deeper.
